## AMGADS III

### Features

### Specifications

#### Functional Description:

AMGADS III utilizes multiple sensors for identifying misdirected gas. The system operates with both a visual and an audible alarm to warn the vehicle operator of potential danger. The system alarms at a trace level (20% LFL) and significant level (50% LFL) of gas concentration. System and sensor operation are constantly monitored and feature zoned sensing capabilities. In addition, AMGADS III features an optional internal relay for automatic control of auxiliary devices (i.e. engine shutdown, fuel valve shutoff, auxiliary alarm, etc.)

#### Multi-Level Alarms

- o Engine Shut Down / Remote Alarm Capability
- o Low Power Consumption
- o Ease of Installation (Modular)
- o Rugged Construction
- o Solid State Sensors
- o No Calibration
- o Self-Test Circuitry
- o Low Maintenance
